

Microsoft Certified Programmer in MVC 4

LinkedIn: - <https://www.linkedin.com/in/jyoti-gupta-39182432/>

Area of Expertise:

- Over 12+ years of full stack development Experience working with clients through conferences/in-person analyzing business requirements, planning to implement business requirements on codebase applications using JIRA and DevOps tool, providing mock screens, Demo to client, final code implementation using best coding practice as per company standards, testing, code merging to master branch, Testing in staging environment and bug fix. working with production code deployment team and provide all details and settings that help in successful deployment. Production Support after deployment.
- Domain knowledge in Finance, Education, Logistics, Insurance, E-Commerce, HR, State Projects, Home Loans.
- My technology expertise includes Developing Web Application, Desktop/Windows application using good understanding of software development life cycle and agile methodologies
- I have experience in throughout the entire Software Development Lifecycle SDLC/AGILE including requirements gathering, analysis, design, development, testing, implementation, and post implementation support.
- Hands on experience on conversion/maintain of legacy project to latest technology project. Java(JSP) codebase convert to .net framework codebase. Convert ASP pages to ASPX pages.VB6 project to .Net framework
- Able to learn and implement new technologies and tricky concepts rapidly and execute them.

Technical/Computer Knowledge:

- ASP.Net Core, Restful Web API, C#, OOP, OOD, N-tier architecture, N-Layer SOA Architecture Entity Framework, Angular, MVC, Razor view, ADO.NET, WCF, Web Services, Windows services, GIT, TFS, JIRA, Jenkins/Gitlab/DevOps CI/CD pipeline, jQuery, JavaScript, AJAX, HTML, CSS, Bootstrap, XML, MVPC Design Patterns, Crystal Reports, WPF, LINQ, JSON, PHP, PL SQL, T-SQL, Mongo DB, Cosmos Db, Oracle, TFS, JIRA, Microsoft Test Professional, N-Unit, Swagger, Postman, Fiddler, DynaTrace, SONAR QUBE, Splunk, HPQC/ALM,

Academic Qualification

- Masters in Computers Applications (MCA) 2006 from University-RGPV (M.P.) India.
- Bachelors in Computer Science (B.Sc.) 2002 from University-RDVV Jabalpur (M.P.) India.

Work Experience:

Dell Technologies		(Aug 2022 – till)	
Role	Project	Domain	Location
Consultant Software Engineer/Lead	Dell Premier Account	E-Commerce	Remote

Technology: .NET Core, C#, OOP, OOD, Dependency injection, ORM tool Entity Framework, Web Form, N-tier / n-layer /SOA architecture, Multithreading, GIT-Lab version control, CI/CD, Agile, CSS, HTML, JSON, Bootstrap, Angular 14+, Web API restful services, Swagger, MS Azure, Devops, Fiddler, Postman, Playwright, DynaTrace, SONAR QUBE, Splunk, Cosmos Db, MongoDB.

Description: Working on dell premier website of Dell www.dell.com/acount/. This is meant to use for Premier/wholesale customer of dell products.

It is E-commerce project .I am working on Multiple quote checkout .Here client can create multiple quotations of multiple products and place a single order .That saves lot of user's time and build business for company .This application is based on n-tier and n-layer service based architecture .

Roles & Responsibilities:

- leading the team, helping team to understand new requirement and implement requirement on code to get final asked product.
- Assists other team members within the division and department as needed.

- Involved in requirement gathering, planning, Development, code quality check, code merging, deployment, production support.
- Architect our module as per company standards.
- Creating Web API's by following SOLID principle to serve the purpose of distributed service oriented application for code reusability.
- Using Angular 17+, Node.js for UI development.
- Creating end for WEBAPI and developing logic into API, end to end work on API, Azure functions for rest API.
- Monitoring API's and its performance using AZURE APM, and AZURE alerts.
- Using GitLab for version control, Using Git command for pull, push, fetch, stash, cherry-Pick code etc.
- Using GitLab CI/CD pipeline for project deployment, code merging, code quality check, build management.
- We are following 2-week sprint practice in fully agile environment.
- I am using JIRA and Devops tool for managing user stories.
- I am using multiple tools for maintain code quality and performance like SONAR QUBE during code merging, copilot AI tool during code development.
- I am using DynaTrace for measure API's performance and measure traffic.
- I am using Splunk to keep logs.
- I am writing UX automation using Playwright and MongoDB.

Caliber Home Loans			(Aug 2018 – June 2020)
Role	Project	Domain	Location
Sr. Software Engineer/Lead	H2O , BOLT ,LC Portal	Mortgage / Home Loans	Carrolton , TX

Technology VISUAL STUDIO 2019, .Net Core 4, WCF, C#, OOP, OOD, Dependency injection, PL/SQL, Cosmos Db, Windows Services, ORM tool Entity Framework, Web Form, MS Azure, N-tier / n-layer /SOA architecture, WCF services, VSTS GIT version control, Devops, Agile, Scrum, Web Form, MVC 5 razor view, Blazor, CSS, HTML, PHP, java script, jQuery plugins, JSON, Bootstrap, AngularJS, Angular 7, node JS, Web API restful services, Swagger, Agile, Scrum, Fiddler, Postman, event viewer, red gate.

Description: This is Home loan project where we have 3 different applications to facilitate Home buyer, back end Admin and Home broker agents.

Worked on Customer facing application to apply for home loan .we are using Azure for APIM /deploying services in azure , cloud Data base , App insights for error log , alerts for sending email for API failure/node down etc. in production .Working On internal Application H2O to access loan for Loan consultant and other roles to process and close the loan .This is our legacy application that use VB.NET ,C#,MVC ,JavaScript, Stored procedures , WCF,WSO3 service token for authentication and we are making new changes using SSO OKTA for authentication, angular 7, VS2019,WebApi , nuget package .net .

Roles & Responsibilities:

- leading the team, helping team to understand new requirement and implement requirement on code to get final asked product.
- I am involved in team of Development / deployment /production support.
- working on production bug fixing, maintenance, new development in Project.
- Architect our module as per company standards.
- using angular 7 as web application development.
- Using API, WCF, Stored Procedure to interact with DB form Web Application.
- writing Stored Procedure, Query joins, triggers Indexes to achieve business logic using PL SQL, this project is **data driven** project.
- Entity framework, model first is using to create ROM.
- Creating end for WEBAPI and developing logic into API, end to end work on API, Azure functions for rest API.
- Using security features to secure website, like creating token and passing along to header or with address bar.
- Designed and developed new User Interfaces and wrote code for Business Logic using C# OOP, OOD.
- We are using Azure for APIM /App-Insights /Alert/rout configure node for load balance/cloud Database/API health check.
- We are using MSMQ messaging to manage the load of requests.
- Use Agile tools like Azure DevOps to manage tasks, track progress, source safe control, code merging, branching, create User Story and task and ensure timely delivery of deliverables.
- AZURE DevOps CI/CD pipeline using to build project and project deployment.
- Working as a full stack developer in Agile environment.
- working in project deployment process to deploy project in every 15-day release using VSTS.

Thomson Reuters			(Nov 2017 to Aug 2018)
Role	Project	Domain	Location
Sr. Programmer Analyst	TAX and accounting	TAX and accounting	Carrolton , TX

Technology VISUAL STUDIO 2015, WCF, C#, OOP, OOD, Dependency injection, PL/SQL, Windows Services, ORM tool Entity Framework, Web Form, MS Azure, N-tier / n-layer /SOA architecture, WCF services, TFS, Azure VSTS GIT version control, Agile, Scrum, Web Form, MVC 5 razor view, CSS, HTML, PHP, java script, jQuery plugins, JSON, Bootstrap, AngularJS, Web API restful services, Swagger, Agile, Scrum, Fiddler, Postman, event viewer, red gate, PHP.

Description: This project takes care of all FATCA/CRS/IRS tax document for multiple countries. Various banks are our client who are

using AEOI application to calculate reporting tax person and non-reporting tax persons.

Roles & Responsibilities:

- Doing bug fixing, maintenance, new development in Project.
- Designing Front layer using HTML, ASPX, Razor JavaScript, CSS, Bootstrap for web application.
- WCF to make application service oriented and reusable to all other layers
- writing Stored Procedure, Query joins, triggers Indexes to achieve business logic using PL SQL, this project is **data driven** project.
- Entity framework, model first is using to create ROM.
- Creating end point for WEBAPI and developing logic into API, end to end work on API.
- Using security features to secure website, like creating token and passing along to header or with address bar.
- Designed and developed new User Interfaces and wrote code for Business Logic using C# OOP, OOD.
- Using VSTS /GIT for source safe control, code merging, branching, create User Story and task and CI/CD pipeline for project deployment.
- Working as a full stack developer in Agile environment.

BNSF Railway (July2016 to Nov 2017)			
Role	Project	Domain	Location
Sr. Programmer Analyst	EAM- Asset Management	Transportation/Trucking/Railroad Asset	Fort Worth , TX

Technology ASP.NET 2015, WCF, C#, OOP, OOD, Dependency injection, SOLID principle, Multi-threading, Multi-tasking, Delegates, SAP, Sybase database, PL/SQL, Windows Services, ORM tool Entity framework, Windows services, Web Form, N-tier / n-layer /SOA architecture, WCF services, TFS, Agile, Scrum, Window8.1 mobile, MVVM, Web Form, MVC 5 razor view, CSS, HTML, java script, jQuery plugins, JSON, Bootstrap, WebApi, restful services, TFS, Agile, Scrum, Fiddler, Postman.

Description: I am working on EAM Project in BNSF. This is Asset management project for BNSF railway. That application is able to keep track of all asset related to rail and railroad for example Track, Arches, Culvert, tunnel, bridges, signal etc. Application validations/workflow guide user to fill all technical aspects to create asset so user will not lose any important information later. In other way Application guide you to link all assets together.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business standards.
- Designing Front layer using WPF, Windows 8.1 mobile.
- WCF, single responsibility API's to make application service oriented and reusable to all other layers as a distributed application.
- Sybase DB for local DB and SAP for main database to sync when user comes online.
- Designed and developed new User Interfaces and wrote code for Business Logic using C# OOP, OOD, SOLID principles
- Created reusable User Control, custom controls for reusability of control in various projects.
- Mock testing, unit testing for developed screen.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Production support, Bug fixing for web project.
- Authentication and authorizing data set using OAuth and basic Authentication by passing token with Api call.
- Using TFS for source safe control, code merging, branching, create defect and assign to offshore team, Keep track of backlog item, defects, release items.
 - Keep tracking all request and response for server using Fiddler /Postman /swagger Tool, Very good understanding of developer tool of all browsers (Chrome, IE, and Mozilla)
 - Using HPQC / ALM tool to write test script. managing support tickets.

Frontier Communications (Jan 2016 to July 2016)			
Role	Project	Domain	Location
Sr. Programmer Analyst III	https://frontier.com/	Telecom/communication	Dallas, TX

Technology: ASP.NET 2012, MVC 5, C#, OOP, object oriented design, IIS, SQL Server 2012, PL/SQL, T-SQL, JavaScript, Windows Services, ORM tool Entity framework, Windows services, Web Form, CSS, HTML, java script, jQuery plugins, JSON, Bootstrap, Angular JS, N-tier / n-layer /SOA architecture, Web-API, restful services, TFS, Agile, Scrum, Fiddler, Postman, Site core, Angular JS.

Description: It is an automated Telecom customer facing web application. Here after user's login, system can troubleshoot user

queries as per given selected options.

Frontier is a telecom company. I worked on the project which is part of enterprise portal for commercial business and residential business. Using that website customer can report a problem on Phone line /Circuit Line. Enterprise Customer can schedule appointment if facing any trouble in purchased product. That portal assist customer to test phone line to create a new trouble ticket. Customer can create trouble ticket for circuits (called remedy) and Phone number (called DPI). Customer can view status of ticket and edit or escalate the ticket.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Production support, Bug fixing for web project.
- Authentication and authorizing data set using OAuth and basic Authentication by passing token with Api call.
- Keep tracking all request and response for server using Fiddler /Postman /swagger Tool, Very good understanding of developer tool of all browsers (Chrome, IE, and Mozilla)

City of Dallas			(March 2015 to JAN 16)
Role	Project	Domain	Location
Sr. Programmer Analyst	https://www.dallasopendata.com	State Project	Dallas, TX

Technology : ASP.NET 2012,MVC 5,C#,OOP, object oriented design, IIS, SQL Server 2012, PL/SQL ,T-SQL, JavaScript ,Windows Services ,ORM tool Entity framework , Windows services ,Web Form , CSS , HTML , java script , jQuery plugins, JSON , geoJSON , KML, CSV, Leaflet Map,D3JS,AmCharts,Chart.JS , Bootstrap, Angular JS, Façade and factory Design Patter ,Dependency injection, N-tier architecture, n-layer architecture, TFS, Agile, Scrum, Fiddler, Postman, WPS, SOCRATA web API's, SODA.NET.

Description: This is application where Govt. Employees can upload their data in form of excel/csv/cloud Web Api's and application converts that data into visual graph/ chart / Map form to analyze data in visual form.

Working on Web Project that is public website of Dallas city. I am uploading data on leaflet Web map (Like Google Map) using geoJSON, KML, CSV or any other source of data. Customizing map as per GIS requirement using Leaflet Map, Google Map, jQuery, CSS, Angular JS, Bootstrap. Drawing shapes/polygon on map and finding points/cluster resides in map that basically help user to draw filter to see data in required area rather than see all area. Working on graphs that compare and show real value on graph for more visualization. Creating drill down chart using Pai,Column,Scatter,Stock and many more different kind of chart. Working on OAuth Authorization to access and perform CRUD operation in Private data set from Socrata (SODA)(third party server dataset) using MVC5 .

Writing Business logic to perform CRUD in MVC from entity framework. Writing code to fetch data from third party Server like SOCRATA in the form of JASON or any file formats.

Some links are below which gives reference of my work.

<https://www3.dallascityhall.com/publicdata/offense-search.html>

<https://dallascityhall.com/departments/sustainabledevelopment/Pages/Reports.aspx>

Roles & Responsibilities:

- Designing Front layer using CSS, JavaScript, jQuery and open source plugins.
- Reading data from data file geoJSON,JSON,CSV,KML,TXT,CSV,
- Designed and developed new User Interfaces and wrote code for Business Logic using OOP, Data Layer to populate the appropriate Data.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- working on SOCRATA cloud tool to access secure API's to access data in UI.
- Using TFS for source safe .
- Working on Front Layer Middle Layer, Data Access layer.
- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Architect our module as per company standards.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.

- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.
- Created multilingual pages to access multiple languages for global use of project.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Production support, Bug fixing for web project.

Dell (SEPT 14 to MAR 15)			
Role	Project	Domain	Location
Sr. Software Developer	TENET Healthcare	Healthcare	Plano, TX

Technology : MSDN Visual Studio VB.NET, Windows form, Oracle, IIS, ASP, Visual Studio NET 4.5, C#, OOP, (OOD)object oriented design, SQL Server 2008,2012, PL/SQL, T-SQL, JavaScript, AJAX, SSIS ,ETL, Web Services, WCF,WPF ,LINQ, Design pattern, Web API, TFS, Agile, HTML, JQuery, CSS, Entity Framework-(ORM), MVC 4 framework, Angular JS, bootstrap, Web Form, Windows Form, multithreading.

Description: HRMSWeb & ESS (Employee Salary System): - This HR Management system which manage employee's payroll and attendance in office.

HRMSWeb & ESS (Employee Salary System): - HRMSWeb is a website accomplish login requirement for Employee, Admin and many more role for HR. Using HRMSWeb User can see all HR and Payroll related requirement. Admin can add user to see the screens. In ESS Project I have create new tab and all relevant UI that show all information about user daily punch in/out which is called KRONOS punch here. I did create new Windows services that daily upload data from text file to database. I did create new ORM classes for newly added tables.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing for developed screen.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Production support, Bug fixing for web project.
- Created new Windows service package that reads time Entry file daily at 10 PM from server and upload on Appropriate Sql DB. Basically doing DTS job from new Service
 - Bulk upload from various file to Data set.
 - Generating new class using xsd.exe tool for ORM or data transfer object.
 - Understood and Follow very complex architecture for CRUD operation.
 - Created Technical Document, Class Diagram, Functional document for worked module.

Ohio Department of Natural Resources (SEPT 2013 to SEPT 2014)			
Role	Project	Domain	Location
Technical Specialist 2	WELL Log, OFIS	Govt Sector	Columbus, OH

Technology : MSDN Visual Studio VB.NET, Windows form, Oracle, IIS, SSIS ,ETL ,ASP, Visual Studio NET 4, C#, OOP, object oriented design, SQL Server 2008,2012, PL/SQL, T-SQL, JavaScript, AJAX, Web Services, WCF,WPF ,LINQ, Design pattern, Web API, TFS, Agile, HTML, JQuery, CSS, Entity Framework-(ORM), MVC 4 framework, Angular JS, bootstrap, Web Form, Windows Form, Red Teleric control.

Description :

Project 1- Well Log:-This project keep track of all the Wells locations and allotment in Ohio state .

Well log windows project take care of all Well, borehole drilled in Ohio State. Using that project user can enter well Location and other important parameter like latitude longitude to get exact location of well, well size, type, used material for borehole casing etc. User can search exact location of well on the base of various search criteria .user can scan Image, pull image from data base. That project was built in Classic ASP my role was understanding logic from old project and apply in new project and give support to old classic asp website as well. Project Link: <https://waterwells.ohiodnr.gov/search/classic-search/custom>

Project 2 -OFIS:-This web project is taking care of All variety of fishes exist in Ohio state.

project Link: <https://ohiodnr.gov/buy-and-apply/hunting-fishing-boating/fishing-resources/fishing-regulations>

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Perform role of BA, QA, Developer, and DBA.
- Maintained old legacy project in Asp and rebuild same logic in new application with code reusability. C# libraries I made used in other web and windows project too for sharing same logic, which saved lot of cost in project and helped other team also by getting ability to reuse code and logic as distributed system.
- Design and implement new architecture for project using n layers' architecture.
- Used Google web API for GIS to show perfect location of drilled well when user enters longitude and latitude in windows application.
- UI design prototype for client approval for all pages of project using WPF.
- Converted old Classic ASP and VB6 Project in VB.NET 4.5.
- Created reusable libraries, DLL for business logic.
- Directly interaction with clients to gather requirement.
- Managed more than 130 control on a single page that includes almost all popular control like List, multiple Grid, Text, Drop down, Tab control. Managed multiple event on same page using asynchronous coding using Ajax JavaScript.
- Designed and developed new User Interfaces and wrote code for CRUD Business Logic using OOP, OOD,SOLID Principles and distributed application approach .
- Developed, packages, Stored Procedure, functions, and views in ORACLE as per the business requirements.
- Design BRS, Technical Document, and Class Diagram using VISIO.
- Used Entity framework for ORM to DB.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Architect our module as per company standards.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.

ICC		(NOV 2011 – SEPT 2013)	
Role	Project	Domain	Location
Sr. Programmer Analyst / Team lead	AMS-Associate Management System	HR	Columbus, OH

Technology : MSDN Visual Studio VB.NET, Windows form, Oracle, IIS, ASP, Visual Studio NET 4, C#, OOP, object oriented design, SQL Server 2008,2012, PL/SQL, T-SQL, JavaScript, AJAX, Web Services, WCF,WPF ,LINQ, Design pattern, Web API, TFS, Agile, HTML, JQuery, CSS, Nhibernate-(ORM), MVC 4 framework, Angular JS, bootstrap, Web Form, Windows Form, Azure.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.
- Research on Azure Cloud Computing for project demand.
- Managed teams of fresher's and guide them on coding and project.

Client A: Thirty One Gifts

Project : Party Plan (<http://www.thirtyonegifts.com/>) Web Project

Technology : MSDN Visual Studio VB.NET, Windows form, Oracle, ASP, Visual Studio NET 4, C#, OOP, object oriented design, SQL Server 2008, 2012, PL/SQL, T-SQL, JavaScript, AJAX, Web Services, WCF,WPF,LINQ , Design Pattern ,n-tier architecture, Web API, TFS, Agile, HTML, J-Query, CSS, Entity Framework(ORM), MVC 4 framework, IIS, Web Form, Windows Form.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.

- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.
- Created multilingual pages to access multiple languages for global use of project.

Client B: - Z-node

Project : E-Market place, Merchant Admin, Site Admin (<http://market.hibu.com/>)

Technology : MSDN Visual Studio VB.NET, ASP, Visual Studio NET 3.5,4, C#,OOP, object oriented design, SQL Server 2008, PL/SQL,T-SQL, JavaScript, AJAX, Web Services , WPF,LINQ , Web API, Tortoise SVN, J-Query, CSS, Entity Framework, Unit Testing, ETL ,MVC4, ,Angular JS, bootstrap ,Design Pattern ,Google API, n-tier architecture, Dependency Injection, Code Smith ORM Tool, Entity Framework, IIS, Web Form, Windows Form.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.
- Created multilingual pages to access multiple languages for global use of project.

Accenture				(DEC 2010- NOV 2011)
Role	Project	Domain	Location	
Sr. Programmer Analyst	CCS (Claim component services) Insurance Portal	Insurance	Mumbai & NY	

Technology : MSDN Visual Studio VB.Net, ASP, Visual Studio Net 3.5, C#,OOP, object oriented design, VB6 , SQL Server2008,PL SQL, T-SQL, JavaScript, AJAX, web services , Web API, WCF, MVPC Patterns, TFS –Team Foundation server, JQuery, Entity Framework, Microsoft unit testing, ETL, Design Pattern ,n-tier architecture, Custom controls, IIS, Web Form.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Developed, packages, Stored Procedure, functions, and views in PL Sql as per the business requirements.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Created User Control, custom controls libraries for reusability of control in various projects.
- Mock testing, unit testing, entry level testing, exit level testing for developed screen.
- Created multilingual pages to access multiple languages for global use of project.

Kale Logistics Solutions				(APR 10 – DEC 10)
Role	Project	Domain	Location	
Sr. Software Engineer	http://www.upliftindia.com	Logistics, Transportation, Shipping	Mumbai, India	

Technology : MSDN Visual Studio VB.NET, Asp, Visual Studio Net 3.5 & 4.0, C#,OOP, object oriented design, ANSI queries (SQL Server2008, PL SQL, T-SQL +Oracle), JavaScript, Ajax, Web services, WCF, TFS, VSS-visual source safe, JQuery, Entity Framework, ETL ,Design Pattern ,n-tier architecture, teleric control, custom control, Web Form .

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Used Crystal reports for generating Bills.
- Created User Control, custom controls libraries for reusability of control in various projects.

Aptech, Mumbai(www.aptech-worldwide.com)				(APR 09 – APR 10)
Role	Project	Domain	Location	
Executive Software Engineer	Aptech Retail portal	Education	Mumbai, India	

Technology: MSDN Visual Studio ASP.Net 2.0 & 3.5, C#, OOP, object oriented design, SQL Server 2005, PL SQL, T-SQL, JavaScript, Ajax, web services, VSS, Web Form, Windows Form, SSRS.

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.
- Used Crystal Reports and SSRS reports to generate Student Certificate, receipt, student course detail etc.

Financial Technology, Mumbai(www.ftindia.com)			(NOV 07 – APR 09)
Role	Project	Domain	Location
Executive Software Engineer	Commodity Exchange & Digi Doc Manage	Financial	Mumbai, India

Technology : Visual Studio ASP.Net 2.0, C#, OOP, object oriented design, Unit Testing, SQL Server 2005, PL SQL, JavaScript, JSP, Java, web services, HTML, Web Form.

Roles & Responsibilities:

- As Full Stack Developer perform CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.
- Worked in N-Layer, N-Tier very secure SOA Architecture for best code reusability, security and maintain high level business.

Pay point India, Mumbai (www.paypointindia.com)			(MAY 07 – DEC 07)
Role	Project	Domain	Location
Software Developer	Back Office	Retail- Payment services Product	Mumbai, India

Technology : ASP. Net 2.0, C#, OOPS, VB6, SQL 2005, PL SQL, JavaScript, web services, Web Form, Win Form

Roles & Responsibilities:

- As Full Stack Developer performed CRUD operation, code management for Front end, Middle layer and backend.
- Worked in complete SDLC System Analysis, Design, Development, Testing, Bug fixing, Documentation.

Cylsys Technologies (www.cylsys.com)			(JAN 2006 – MAY 07)
Role	Project	Domain	Location
Jr. Software Developer	http://www.landmarketer.com	Real Estate	Mumbai, India

Technology : MSDN ASP. Net 1.1 & 2.0, SQL Server 2005, PL SQL, Oracle, JavaScript, DNN (Dot net nuke) , VB, C#, OOP, Classic ASP, Web Form .
